IDEE

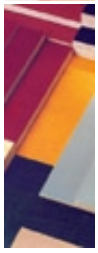
Meie rambid on projekteeritud nii individuaalseks kasutamiseks kui ka kasutamiseks professionaalsetes rula parkides kus võivad olla nõudmised rahvusvaheliste võistluste korraldamiseks. Rambid on suurepärane lahendus sõitmiseks rulluiskudel, rulaga ja BMX rattaga.

Professionaalsed rulasõitjad on võtnud osa rampide väljatöötamisel ja kujundamisel. Samuti on nende osavõtul projekteeritud ka rulapargid. Meil on projekteeritud ja olemas oma rulapark kus on võimalik proovida ja katsetad meie tooteid ning materjale intensiivsel kasutamisel.

MÕÕTMED JA TURVALISUS

Rampide kvaliteet vastab saksa sertifikaadi nõuetele - DIN33943 Rollsportgeräte-Skateeinrichtungen Begriffe sicherheitstecnihe Andorderungen Prüfung, mis reglementeerib erinevate rampide suurused, kasutamise nõuded ja paigaldamise.

KASUTATAVAD MATERIALID



Rampe tehakse vineerist, mis koosneb kooritud ristkinnitusega kasespoonist ja kleebitud veekindlast fenool-formaldehüüd vaigust, mis teeb sellest vastupidava homogeense materjali.

Rambi tootmises kasutatakse karbolikihiga kaetud vineeri. OOO (piiratud vastutusega ühing) Latvijas Finieris toodetud vineer on väga vastupidav ning seda on võimalik kasutada karkassi raketise või kattena. Antud vineeri toodetakse taastuvatest varudest, vineer on korduvkasutatav ja kergesti utiliseeritav.

Vineere RIGA PLY, RIGA FROM, SMOOTH MESH kasutatakse rampide valmistamiseks.

1) RIGA PLY WG/WG – kasutatakse pinna alumise kihina. Tänu sellele vineerile on võimalik vähendada tootmis- ja ekspluatatsioonikulusid.

2) RIGA FROM F/F d.br. – kastutatakse karkassi ja rambi külgede tootmises.

3) SMOOTH MESH d.br. – püsivam ja libisemiskindel vineer, mida kasutatakse pinnana, mille peal sõidetakse. Pinna paksus on 6,5 mm.

Detailide ääred on kinni kleebitud. See loob elastse kaitsekihi ning vähendab puidu reljeefsust.

Rambi pealmist kihti on võimalik vahetada, tõmmates vana kihi ära ja paigaldades selle asemele uue kihi. Metalldetailid on tsingitud ning see vähendab korrosiooni. Rampe on kerge transportida ja paigaldada.

Standardne konstruktsiooni laius on 1,5 m. Osasid kokku pannes saad kombineerida selliseid rampe ja parke nagu sulle meeldib.
